**New Modernist Type**-Steven Heller 2012 Classic modern design never goes out of style: it is merely retired or subtly adapted to its given place and time. New Modernist Type is a collection that reveals how a graphic language of simplicity and economy has impacted contemporary design. Hundreds of modern examples by international designers are grouped into four thematic chapters: Economy, Pure and Simple; Old Modern Redux; Modern Signs and Symbols; and New, Newer, Newest. With an historical introduction putting todays tendencies in context and a reference section that includes a list of designers websites, New Modernist Type is a rich sourcebook of ideas for the most functional of styles.

**Modern Perspectives in Type-Theoretical Semantics-Stergios Chatzikiakidis** 2017-02-07 This book is a collective volume that reports the state of the art in the applications of type theory to linguistic semantics. The volume fills a 20 year gap from the last published book on the issue and aspires to bring researchers closer to cutting edge alternatives in formal semantics research. It consists of unpublished work by some key researchers on various issues related to the type theoretical study of formal semantics and further exemplifies the advantages of using modern type theoretical approaches to linguistic semantics. Themes that are covered include modern developments of type theories in formal semantics, foundational issues in linguistic semantics like anaphora, modality and plurals, innovative interdisciplinary research like the introduction of probability theory to type theories as well as computational implementations of type theoretical approaches. This volume will be of great interest to formal semanticists that are looking for alternative ways to study linguistic semantics, but will also be of interest to theoretical computer scientists and mathematicians that are interested in the applications of type theory.

**Formal Semantics in Modern Type Theories-Stergios Chatzikiakidis** 2021-02-17 This book studies formal semantics in modern type theories (MTTsemantics). Compared with simple type theory, MTTs have much richer type structures and provide powerful means for adequate semantic constructions. This offers a serious alternative to the traditional settheoretic foundation for linguistic semantics and opens up a new avenue for developing formal semantics that is both model-theoretic and proof-theoretic, which was not available before the development of MTTsemantics. This book provides a reader-friendly and precise description of MTTs and offers a comprehensive introduction to MTT-semantics. It develops several case studies, such as adjectival modification and copredication, to exemplify the attractiveness of using MTTs for the study of linguistic meaning. It also examines existing proof assistant technology based on MTT-semantics for the verificiation of semantic constructions and reasoning in natural language. Several advanced topics are also briefly studied, including dependent event types, an application of dependent typing to event semantics.

**All that is Solid Melts Into Air-Marshall Berman** 1983 The experience of modernization -- the dizzying social changes that swept millions of people into the capitalist world -- and modernism in art, literature and architecture are brilliantly integrated in this account.

**Modern Powder Diffraction**-David L. Bish 2018-12-17 Volume 20 of Reviews in Mineralogy attempted to: (1) provide examples illustrating the state-of-the-art in powder diffraction, with emphasis on applications to geological materials; (2) describe how to obtain high-quality powder diffraction data; and (3) show how to extract maximum information from available data. In particular, the nonambient experiments are examples of some of the new and exciting areas of study using powder diffraction, and the interested reader is directed to the rapidly growing number of published papers on these subjects. Powder diffraction has evolved to a point where considerable information can be obtained from ug-sized samples, where detection limits are in the hundreds of ppm range, and where useful data can be obtained in milliseconds to microseconds. We hope that the information in this volume will increase the reader's access to the considerable amount of information contained in typical diffraction data.

**Modern Optimization with R**-Paulo Cortez 2021-07-30 The goal of this book is to gather in a single work the most relevant concepts related in optimization methods, showing how such theories and methods can be addressed using the open source, multi-platform R tool. Modern optimization methods, also known as metaheuristics, are particularly useful.
for solving complex problems for which no specialized optimization algorithm has been developed. These methods often yield high quality solutions with a reasonable use of computational resources (e.g., memory and processing effort). Examples of popular modern methods discussed in this book are: simulated annealing; tabu search; genetic algorithms; differential evolution; and particle swarm optimization. This book is suitable for undergraduate and graduate students in computer science, information technology, and related areas, as well as data analysts interested in exploring modern optimization methods using R. This new edition integrates the latest R packages through text and code examples. It also discusses new topics, such as: the impact of artificial intelligence and business analytics in modern optimization tasks; the creation of interactive Web applications, usage of parallel computing; and more modern optimization algorithms (e.g., iterated racing, ant colony optimization, grammatical evolution).

We Have Never Been Modern—Bruno Latour 2012-11-01 With the rise of science, we moderns believe, the world changed irrevocably, separating us forever from our primitive, premodern ancestors. But if we were to let go of this food conviction, Bruno Latour asks, what would the world look like? His book, an anthropology of science, shows us how much of modernity is actually a matter of faith. What does it mean to be modern? What difference does the scientific method make? The difference, Latour explains, is in our careful distinctions between nature and society, between human and thing, distinctions that our enlightened ancestors, in their world of alchemy, astrology, and phrenology, never made. But alongside this purifying practice that defines us as modern, there exists another seemingly contrary one: the construction of systems that mix politics, science, technology, and nature. The ozone debate is such a hybrid, in Latour’s analysis, as are global warming, deforestation, even the idea of black holes. As these hybrids proliferate, the prospect of keeping nature and culture in their separate mental chambers becomes overwhelming—and rather than try, Latour suggests, we should rethink our distinctions, rethink the definition and constitution of modernity itself. His book offers a new explanation of science that finally recognizes the connections between nature and culture—and so, between our culture and others, past and present. Nothing short of a reworking of our mental landscape. We Have Never Been Modern blurs the boundaries among science, the humanities, and the social sciences to enhance understanding on all sides. A summation of the work of one of the most influential and provocative interpreters of science, it aims at saving what is good and valuable in modernity and replacing the rest with a broader, fairer, and finer sense of possibility.

Modern Approach to Educational Data Mining and Its Applications—Soni Sweta 2021-01-22 This book emphasizes that learning efficiency of the learners can be increased by providing personalized course materials and guiding them to attain with suitable learning paths based on their characteristics such as learning style, knowledge level, emotion, motivation, self-efficacy and many more learning ability factors in e-learning system. Learning is a continuous process since human evolution. In fact, it is related to life and innovations. The basic objective of learning to grow, aspire and develop ease of life remains the same despite changes in the learning methodologies. Introduction of computers empowered us to attain new zenith in knowledge domain, developed pragmatic approach to solve life’s problem and helped us to decipher different hidden patterns of data to get new ideas. Of late, computers are predominantly used in education. Its process has been changed from offline to online in view of enhancing the ease of learning. With the advent of information technology, e-learning has taken centre stage in educational domain. In e-learning context, developing adaptive or personalized e-learning system is buzzword among contemporary research scholars in the area of Educational Data Mining (EDM). Enabling personalized systems is meant for improvement in learning experience for learners as per their choices made or auto-detected needs. It helps in enhancing their performance in terms of knowledge, skills, aptitudes and preferences. It also enables speeding up the learning process qualitatively and quantitatively. These objectives are met only by the Personalized Adaptive E-Learning Systems in this regard. Many noble frameworks were conceptualized, designed and developed to infer learning style preferences, and accordingly, learning materials were delivered adaptively to the learners. Designing frameworks help to measure learners’ preferences minutely and provide adaptive learning materials to them in a way most appropriately.

Hut Pavilion Shrine: Architectural Archetypes in Mid-Century Modernism-Miles David Samson 2016-03-09 The phase of American architectural history we call ‘mid-century modernism’, 1940-1980, saw the spread of Modern Movement tenets of functionalism, social service and anonymity into mainstream practice. It also saw the spread of their seeming opposites. Temples, arcades, domes, and other traditional types occur in both modernist and traditionalist forms from the 1950s to the 1970s. Hut Pavilion Shrine examines this crossroads of modernism and the archetypal, and critiques its implications for the future. The book is unique in one particularly important and omnipresent type, the pavilion - a type which was the basis of major work by Louis I. Kahn, Paul Rudolph, Philip Johnson, Minoru Yamasaki, and other eminent architects. While focusing primarily on the architecture culture of the United States, it also includes the work of British, European Team X, and Scandinavian designers and writers. Making connections between formal analysis, historical context, and theory, the book continues lines of inquiry which have been pursued by Neil Levine and Anthony Vidler on representation, and by Sarah Goldhagen and Alice Friedman on modernism’s ‘forbidden’ elements of the historic and the visually pleasurable. It highlights the significance of ‘pavilionizing’ mid-century design and architecture - as Victor Lundy, Johnsen, Eero Saarinen, and Edward Durell Stone, and shows how frequently essentialist and traditionalist types appeared in the roadside vernacular of drive-in restaurants, gas stations, furniture and car showrooms, branch banks, and motels. The book ties together the threads in mid-century architectural theory that addressed aspects of type, ‘essential’ structure, and primal ‘humanistic’ aspects of environment-making and discusses how these concerns outlived the mid-century moment, and in the designs and writings of Aldo Rossi and others they paved the way for Post-Moderism.

Modern Financial Crises-Beniamino Moro 2015-07-21 This book is devoted to the analysis of the three main financial crises that have marked this century: 2001 Argentina’s defaulting on its external debt, the American subprime crisis in 2008, and the current European debt crisis in Europe. The book pursues three major objectives: firstly, to accurately portray these three financial crises; secondly, to analyze what went wrong with mainstream economic theory, which was unable to foresee these types of economic turmoil; and thirdly, to review macroeconomic theory, re-evaluating Keynesian original contribution to economic analysis and pointing out the need to rebuild macroeconomics with a view to studying economic illness rather than trying to prove the non-existence of economic problems.

Making the Modern World: Materials and Dematerialization-Vaclav Smil 2016-12-04 How much further should the affluent world push its material consumption? Does relative dematerialization lead to absolute decline in demand for materials? These and many other questions are discussed and answered in Making the Modern World: Materials and Dematerialization. Over the course of time, the modern world has become dependent on unprecedented flows of materials. Now even the most efficient production processes and the highest practical rates of recycling may not be enough to result in dematerialization rates that would be high enough to negate the rising demand for materials generated by continuing population growth and rising standards of living. This book explores the costs of this dependence and the potential for substantial dematerialization of modern economies. Making the Modern World: Materials and Dematerialization contains practical materials used throughout history, from wood and stone, through to metals, alloys, plastics and silicon, describing their extraction and production.

Modern Trends Surrounding Information Technology Standards and Standardization within Organizations-Jakobs, Kai 2014-07-31 In fields as diverse as research and development, governance, and international trade, success depends on effective communication. Deep Learning: Ian Goodfellow 2016-11-10 An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, Deep Learning is the only comprehensive book on the subject." —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and neural language modeling; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.
